Rod Holders

Traditional Aluminum Rod Holders

TACO anodized aluminum rod holders are stocked in a variety of styles, sizes, and finishes.

All TACO rod holders are Brite Dip anodized for lasting protection and superior luster. Available in a polished or polished gold finish.

Choose from rod holders without a blade, or with a choice of scalloped or coped blades.

TACO rod holders with flared design allow for easy rod placement. Welded I-Beam pin construction seats rod butt securely in place and is proven to be 2-1/2 times stronger than competitive rod holders.

Specially formulated, fungal-resistant vinyl liners are tapered to fit snugly with flared rod holder design.

Non-flared, traditional design used for welding to towers, T-tops, radar arches, railings and leaning posts.
